

Summary

Provides for remote presenter(s) on a streamed and/or locally-displayed session. The remote session is just another video feed. Director role could be split into Director and Moderator as talent available.

Remote presenter is responsible for managing their camera feeds.

Components and Connections

Uses active switcher combined with local camera(s) as required.

RPi used to display content locally (will need to experiment with. Or just display stream on its delay)

Network switch to ensure that 1) we have a wired connection to WAN, and 2) we have a wired connection between video switcher and control. It could be removed if we wanted to do wireless streaming via control computer.
